

Singlewire Solutions Work for Health Care

Sending and receiving notifications within a hospital or clinical setting can be many different things, with varying levels of complexity. You need to balance the need for quiet floors with the necessity of flexible and immediate communication with a wide variety of devices including pagers, phones, computer desktops, and overhead speakers—all while retaining the ability to easily and quickly send out emergency messages and the policies accompanying them. Peoples' lives are at stake, and emergency notification must be easy, fast, and reliable.

A Singlewire Software health care solution provides your organization with a flexible and effective means for doing all this...and more.

Key benefits to Singlewire's enterprise-class health care solution include:

- Centrally manage your entire paging system, leveraging your Cisco network and Unified Communications infrastructure
- Employ powerful audio and/or text paging to any combination of Cisco IP phones, desktops (PCs, Mac, and Linux), Power over Ethernet speakers, and legacy analog paging systems
- Enjoy administrative simplicity when establishing paging zones, end-user groups, and quiet-floor initiatives within your facilities
- Track assets and people within your organization through RFID technology, and trigger automatic notification to staff and systems if anyone/anything is out of place
- Remotely monitor virtually any IP-enabled device on your network and set a trigger to send notification to staff when abnormal operations are detected
- Make use of a scalable solution—operating on a multicast-enabled IP data network—which ensures reliability and performance
- Realize cost savings by consolidating all paging endpoints onto one IP data network
- Provide flexibility and automate many tasks through our flexible software functionality
- Enable walkie-talkie and intercom communication via your Cisco phones

About Singlewire

Singlewire Software develops and supports innovative voice applications centered around secure, fast, and reliable mass notification capabilities. Our main application offerings: InformaCast, PushToTalk, and DORA allow our customers unprecedented control in designing mass notifications, assigning them to specific recipients, and determining the medium for dissemination—IP phones, IP speakers, email, etc.—all with the peerless capacity for customization to our customers' specific environments. Singlewire is devoted to maintaining the agility and imagination needed to fulfill our customers' needs and fostering an environment for successful partnerships between our customers and our company.
