One Connected School Day

Safety and operations, from morning arrival to the ride home

A school day is full of moments that need a clear answer. Who just came through the front door? Which students are out of class right now? Who is picking up a student today, and did every rider get on the right bus?

In many districts, those answers live in different places: a sign-in sheet at the front desk, paper passes in classrooms, printed pickup lists at the curb, and drill records in a binder. Each works on its own, but together they leave gaps, and they often look different from one building to the next.

Singlewire Campus Aware brings those moments together in one school safety management platform. Visitor check-in, hall passes, dismissal, buses, drills, and reunification share the same data across the school day, so staff in every building work from the same picture.

Morning arrival	Class time	Dismissal	Ride home	Drills and readiness
Visitor Aware	Hall Manager	Dismissal Manager	Bus Manager	Safety Manager

EVERYDAY VALUE

Staff use Campus Aware throughout a normal school day, so it becomes part of the routine rather than one more system that sits idle until it's needed.

CONNECT WHAT YOU HAVE

It runs on the iPads, Chromebooks, PCs, and phones your schools already own, syncs with your student information system, and can integrate with Singlewire InformaCast.

READY WHEN IT MATTERS

The same tools staff use every day help them identify unwanted visitors trying to enter the building, account for students, and reunite families when something unexpected happens.

Campus Aware at a Glance

Campus Aware is school safety management software that helps districts secure campus access and track campus movement. It includes five modules. Mix and match the combination that meets your needs, or start with one and add more as you grow.

VISITOR AWARE	Screens and checks in visitors and volunteers, and handles student tardies and release **Used most by:** Front office staff
HALL MANAGER	Issues digital hall passes, with restrictions and a live view of every active pass **Used most by:** Teachers and administrators
DISMISSAL MANAGER	Assigns each student's dismissal type, coordinates release, and verifies who picks up each student **Used most by:** Front office, teachers, and curb staff
BUS MANAGER	Verifies bus ridership and gives guardians access to boarding and exit insights **Used most by:** Transportation staff and drivers
SAFETY MANAGER	Schedules and documents drills, supports reunification, and collects anonymous tips **Used most by:** Safety leads and administrators

Shared strengths across every module

Runs on devices schools already own (iPads, Chromebooks, PCs, and phones), with no proprietary hardware required

Syncs with your student information system (SIS)

Modules share data across the school day

Location-based licensing, not per seat or per kiosk

Can integrate with Singlewire InformaCast for emergency alerts and incident management

singlewire Campus Aware

What Campus Aware Means for Your Team

Everyone on a district team looks at school safety from a different angle. The tools that deliver the most value are the ones every staff member can rely on, from the front office to the classroom to the curb. Here's what Campus Aware offers each of them.

District leadership

One consistent approach to visitors, student movement, dismissal, and drills across every building, with district-wide records to back it up.

Safety and security leads

A real-time view of who's on campus, private alerts when a flagged visitor tries to check in, documented drills, and a reunification process staff have practiced.

Building leaders

Fewer paper processes in the front office, in classrooms, and at the curb, so staff spend less time on logistics and more time with students.

IT

Runs on devices you already own, syncs with your SIS through OneRoster, and keeps data encrypted and siloed.

Business office

Location-based licensing, no proprietary hardware to buy, and the flexibility to start with one module and add more over time.

Visitor Aware

Know who's in your buildings and why they're there

The front door is where every school day begins. A parent drops off a forgotten lunch, volunteers arrive for the book fair, and a contractor checks in for a repair, often within the same hour. Front office staff need a quick, consistent way to know who each visitor is and whether they should be there. Visitor Aware gives every front door in your district the same simple screening process, so staff can welcome guests with confidence.

VISITOR SCREENING

- Screen every visitor against the National Sex Offender Registry (all 50 states), government databases, and active legal injunctions in real time.
- Use optional encrypted facial recognition* to confirm or dismiss database matches, reducing false positives from common names.
- Maintain custom banned-visitor lists and custody alerts.
- Send private alerts to front office staff, so a flagged visitor can be handled without a scene.

CHECK-IN AND BADGES

- Check in at a self-service kiosk on an iPad, Chromebook, PC, or laptop; with a QR code on a visitor's own phone; or through preregistration links for high-volume events.
- Print photo badges that show each guest's host and permitted areas, with terms-of-entry acknowledgments.
- See a real-time digital logbook, with multi-site insights and automatic host notifications.

VOLUNTEER MANAGEMENT

- Screen volunteers, including national criminal records checks.
- Let volunteers sign in and record their hours automatically.

STUDENT TARDIES AND RELEASE

- Track student tardies and print passes, replacing pen-and-paper records.
- Release students only to guardians who have completed screening and are confirmed as authorized.

**Facial recognition can be fully disabled in states where its use is banned or in communities that prefer not to use it.*

BY THE NUMBERS

In a 2026 Singlewire survey of more than 500 K-12 staff, **86%** said securing the front entrance is a top or high priority, but only **16%** felt their front entrance is completely secure.

Source: 2026 State of Safety & Operational Readiness in K-12 Schools survey

"After they're all checked in, they're like, 'That's it?' It's that quick for them."

– Dr. Rob Phelps, Middle School Principal, Wausau School District (WI)

Hall Manager

Digital hall passes that keep every student accounted for

Students step out of class all day long: to the restroom, the nurse, the counselor, or the library. Each trip is a small moment, but when passes are paper or verbal, no one outside the classroom can see who's out or where they're going. Hall Manager turns each of those moments into a simple digital pass, so teachers, administrators, and staff in the halls can see who's out of class and where they were headed.

DIGITAL PASSES

- Teachers issue digital passes to a specific destination.
- Students can request passes from their own devices.
- Runs in any browser and on iOS and Android.

RESTRICTIONS

- Cap how many students can be out at once, per class or per destination.
- Keep specific pairs of students from being out at the same time.
- Limit passes to high-incident areas at peak times.

VISIBILITY AND READINESS

- See a live view of every active pass, for staff and administrators.
- During an emergency, freeze all passes and see which students are out of class and where they were headed.
- Support accommodations, such as medical or 504 needs, without publicly flagging students.

BUILT FOR ACCOUNTABILITY, NOT SURVEILLANCE

Hall Manager records destination and time only. It doesn't use GPS or beacons, and it doesn't track student location.

BY THE NUMBERS

In a 2026 Singlewire survey of more than 500 K-12 staff, **nearly 75%** said their schools still use analog methods to excuse students from class, and only **11%** were extremely confident administrators could quickly locate a student who had been excused.

Source: Singlewire Software's 2026 State of Safety & Operational Readiness in K-12 Schools survey of 511 K-12 staff members, conducted by Researchscape.

Dismissal Manager

A coordinated, verified end to the school day

The end of the school day moves fast. Buses line up, cars fill the pickup loop, and a parent calls at 2:45 to say a grandparent is picking up today. When dismissal plans live on printed lists and sticky notes, one change can take several calls to reach the right teacher. Dismissal Manager brings every dismissal type into one process, so the office, classrooms, and curb stay in sync and each release is verified.

ONE VIEW OF EVERY DISMISSAL

- See every dismissal type on one real-time dashboard: bus, car line, walker, after-school, alternate guardian, and custom types.
- Set a default plan for each student, synced from your SIS.
- Let staff or parents make one-time or recurring changes.
- Last-minute changes reach the office, the teacher, and the curb at the same time.

VERIFIED PICKUP

- Verify pickups with guardian QR codes and relationship validation against each student's approved-contact list.
- Keep a digital pickup log that records every release.
- Support families without smartphones with printed QR codes, a guardian portal, and manual lookup.

LICENSE PLATE RECOGNITION (OPTIONAL)

- Use your existing cameras to recognize vehicles as they arrive for pickup.
- Get alerts when a banned vehicle is identified.
- Support hands-free curbside protocols.

BY THE NUMBERS

In a 2026 Singlewire survey of more than 500 K-12 staff, only **14%** said their schools use a digital solution to coordinate student release and verify pickups, and **63%** said they deal with dismissal issues that need staff intervention at least monthly.

Source: Singlewire Software's 2026 State of Safety & Operational Readiness in K-12 Schools survey of 511 K-12 staff members, conducted by Researchscape.

Bus Manager

Know which bus every rider took, not just where the bus is

The ride to and from school is part of the school day, but it's often the part with the least information. When a family calls to ask whether their student got on the bus, staff need an answer right away. Bus Manager records every boarding and exit, so transportation staff, the front office, and guardians all work from the same information.

VERIFIED RIDERSHIP

- Students scan a student ID or QR code, or enter a passcode, when they board and exit.
- A green check confirms the right bus, and a red X flags the wrong one.
- Flag students who didn't board as expected, and record unplanned riders.
- Create ad hoc routes for field trips and sporting events.

VISIBILITY FOR STAFF AND FAMILIES

- See active routes, riders, and each bus's last known GPS location on one dashboard.
- Give guardians access to boarding and exit insights through a guardian portal.
- Search a ridership archive, and run ridership reports for funding programs.

BUILT FOR THE BUS

- Runs on a mounted iOS or Android phone or tablet.
- Works offline and syncs when the connection returns.
- Driver PIN lockdown keeps the device focused on ridership.

THE QUESTION IT ANSWERS

Not just "Where is the bus?" but "Which bus did my student take?"

Safety Manager

Drills, reunification, and tips in one place

Preparedness is built in the moments before anything happens: drills that run on schedule, staff who know their roles, and a reunification plan they've practiced. Safety Manager replaces binders and spreadsheets with one place to plan, run, and document that work across every building.

DRILL SCHEDULING AND RECORDS

- Schedule and assign drills across every building.
- Add checklists and document templates so each drill follows the same steps.
- Keep digital records you can share with read-only links, helping your district meet drill requirements.
- Support every common drill type: fire, lockdown, severe weather, earthquake, bus evacuation, intruder, and shelter-in-place.

REUNIFICATION

- Teachers take attendance from a text or email link, with no app to install.
- See real-time student status as students are accounted for.
- Verify guardians before each student is released.
- Support reunification at off-site locations.
- Keep accountability going offline, with data syncing when connectivity returns.

ANONYMOUS TIPLINE

- Give students, staff, and families a way to share concerns, with or without contact information.
- Route tips to administrators, school resource officers, and safety teams.
- Log every tip for follow-up and review.

ONE PLACE FOR PREPAREDNESS

Drills, reunification, and tips live together, so every building follows the same plan and keeps the same records.

How It Works Together

One set of data across the school day, connected to your emergency alerts

Campus Aware modules share data, so information entered once supports the whole school day. Your SIS sync keeps rosters and approved guardian relationships current, and that same information supports student release at the front office, pickups at the curb, and reunification after an incident. Staff learn one platform instead of five separate tools.

Visitor Aware

Dismissal Manager

Bus Manager

Safety Manager

SHARED DATA: ROSTERS, GUARDIANS, AND LOCATIONS

CONNECTS WITH SINGLEWIRE INFORMACAST

Connect with InformaCast

When Campus Aware is integrated with Singlewire InformaCast, everyday school safety management connects directly to your critical communications and incident management.

Flagged check-ins

When a flagged visitor or suspended student tries to check in, InformaCast alerts the right staff with the person's name and the reason they were flagged.

Guest alerts

Guests can opt in at check-in to receive text alerts for the building they're visiting, and they're removed when they check out.

Reunification

An InformaCast scenario can start a reunification event in Safety Manager at the location where it's needed.

Incident button

The Incident button in Campus Aware starts an InformaCast scenario, with an optional 10-second countdown to cancel.

Drill alerts

Starting a drill in Safety Manager triggers an InformaCast scenario, with the message updated for the drill type.

Site-based routing

Each Campus Aware location maps to an InformaCast site, so alerts reach the right building.

InformaCast is a separate Singlewire solution. Talk with your Singlewire account representative to learn more about connecting it with Campus Aware, or visit www.singlewire.com/informacast.

Built on What You Already Own

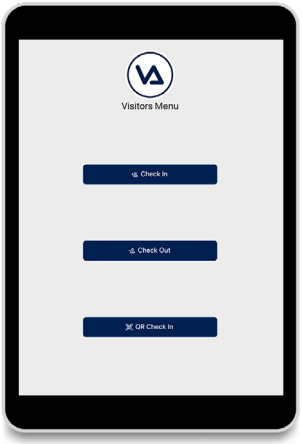

Flexible hardware, flexible rollout

Campus Aware doesn't require proprietary hardware. Your district can use devices it already owns or choose common, widely available equipment that fits its budget, and add more as needs change.

DEVICES THAT WORK WITH CAMPUS AWARE

Check-in kiosks

Apple iPads and iPhones, Chromebooks, PCs, and laptops, for self-service or staff-assisted check-in. The Visitor Aware app on iPad and iPhone adds built-in ID scanning and visitor photos.

Badge printers

Wireless Brother printers, or Dymo and other printers connected through Visitor Aware.

Cameras and scanners

Webcams such as Logitech models, and handheld ID scanners for faster check-in on PCs and laptops.

Stands and mounts

iPad stands and table mounts for check-in areas, and phone or tablet mounts for buses.

START WITH ONE MODULE AND GROW

- Begin with the module your district needs most, then add more modules and locations at your own pace.
- Location-based licensing means you aren't paying per seat or per kiosk.
- Once Visitor Aware is set up, staff can start screening visitors within hours.

"We're not relying on proprietary hardware, which means we can expand more quickly. We could really make the system be what we needed it to be on an event-by-event basis. If we need to add more check-in stations, we can simply put out more iPads."

- Jon Euting, Director of Technology, Wausau School District (WI)

For current supported models, visit the Singlewire support site.

Data Privacy and Security

Your district's data stays yours

School safety tools handle sensitive information about students, staff, and visitors. Campus Aware is built to protect that information and keep your district in control of it.

YOUR DATA, YOUR CONTROL

- Data is encrypted and siloed for each customer.
- Your data is never sold or shared.
- Your district owns its data and sets how long it's kept.

PRIVACY BY DESIGN

- Check-in devices delete visitor information after each check-in, so nothing is stored on the device itself.
- Facial recognition in Visitor Aware is optional and can be fully disabled.
- Hall Manager records pass destinations and times only, with no GPS or beacons.
- Bus Manager devices use a driver PIN lockdown.

RECORDS FOR ACCOUNTABILITY

- Keep a real-time visitor logbook, a digital pickup log, a searchable ridership archive, and a log of every tip.
- Review what happened, when, and where, for follow-up and reporting.

SECURE ACCESS

- Sign in with ClassLink, Clever, Google, or Microsoft.
- Sync rosters through OneRoster.

Implementation and Support

A proven process, and a team that stays with you

An effective safety system starts with a successful deployment. Singlewire's implementation specialists and engineers work directly with your team through a proven four-step process, so your rollout starts on the right foot.

1

DISCOVERY

A technical overview to confirm modules, prerequisites, and your timeline

2

VALIDATION

Confirm technical readiness and hardware compatibility

3

DEPLOYMENT

Engineer-guided install sessions, system configuration, and testing

4

TRAINING

Instructor-led admin and end-user training, recorded for future reference

AFTER YOU'RE UP AND RUNNING

Once your district is live, Singlewire shares feature updates, best practices, and on-demand resources so your team keeps getting the most out of Campus Aware.

Customer Satisfaction Score of

4.8 out of 5

on completed services/projects

Campus Aware

What Districts Are Saying

> Choosing something more modern, and with a better interface, we thought we would be paying more. But in the end, Visitor Aware is costing us less per year to operate and it's infinitely better.
>
> – David Osterquist, Security Coordinator, Sioux Falls School District (SD)

> Staff are at ease knowing that there is a process in place. The badges make it easy to identify guests who have gone through the system, and staff are trained to intervene when they see someone without a badge.
>
> – Sarah Budny, Elementary School Principal, Wausau School District (WI)

> It's quicker and much more accurate. I see a picture of who's here, I see when they leave, and I see where they went. That's all peace of mind.
>
> – Julie Grosse, main office assistant, Edgewood High School of the Sacred Heart (WI)

WHERE SCHOOLS ARE FOCUSING IN 2026

In a 2026 Singlewire survey of more than 500 K-12 staff:

46%

Cite lack of staff as their top entrance challenge, up from 30% in 2025

33%

Rely on a photo ID as their only check, among the 71% who require one

63%

Deal with dismissal issues that need staff intervention at least monthly

These are the gaps Campus Aware is built to help close: simple processes that ease the load on busy staff, consistent screening at every door, and a verified end to every school day.

Source: Singlewire Software's 2026 State of Safety & Operational Readiness in K-12 Schools survey of 511 K-12 staff members, conducted by Researchscape.

See Campus Aware in Action

Every district's school day looks a little different. In a demo, our team will walk through how Campus Aware fits your buildings, your processes, and the modules that matter most to you, from the front door to the bus loop.
