

InformaCast®

PAGING GATEWAY

Due to routing or bandwidth limitations, certain environments make it difficult to use the multicast audio streaming InformaCast requires across the WAN (wide area network). That's why Singlewire Software offers a Paging Gateway to help overcome these challenges and enable organizations to send audio to remote sites. The Paging Gateway takes a unicast audio stream and converts it to multicast audio that phones and IP speakers can receive and play.

HARDWARE PAGING GATEWAY

The Hardware Paging Gateway is delivered to you ready to run on a compact, integrated server designed for indoor use.

Physical Dimensions: 4.57" L x 3.23" W x 1.34" H

Power supply output: 18V / 15 W

Power Adapter Included: AC/DC 12 V, 36 W – with Interchangeable Plug

Operational temperature range and humidity: Temperature Range: 0 – 40°C, Humidity: 0% – 90%

Warranty: 1 year

Part #: IPTA-PG-APL2

Note: Singlewire recommends installing the hardware paging gateway in an environment designed for computer equipment, such as a server room with air conditioning.
